

Training Brief: February 2026

Highway safety.

Operations on the roadway continue to be a high-risk event with daily occurrences of apparatus and workers being struck at the incident site. Setting up Incident management zones and proper blocking are some of the techniques to improve our safety. These skills should be reviewed and the equipment evaluated regularly.

Through a special agreement with the Federal Highway Administration, the Responder Safety Learning Network (RSLN) offers a [National TIM Training Certificate](#) for registered users who complete ten specific RSLN online self-paced programs. To earn credit for each program, you must view the program in its entirety and pass the Skills Challenge test. Once you earn credit for all ten programs, you will be able to download a certificate

On this site, you can register as an instructor to gain additional capabilities to use the site in department training classes. Programs do not need to be completed in a one-night session and can be completed over time.
